

2017 - 2018 Press Kit

About APCO International

Founded in 1935, the Association of Public-Safety Communications Officials (APCO) International is the world’s oldest and largest organization of public safety communications professionals and supports the largest U.S. membership base of any public safety association. APCO International provides public safety communications expertise, professional development, technical assistance, advocacy and outreach to benefit more than 30,000 members and the public. The corporate headquarters of the Association is located in Daytona Beach, Florida with executive and government affairs offices located in Alexandria, Virginia.

Executive Director: **Derek K. Poarch**, Alexandria, VA; poarchd@apointl.org

Current Issues

What's Trending in the Public Safety Communications Industry

9-1-1 Location Accuracy

Locating wireless 9-1-1 callers presents a challenge for 9-1-1 call centers, especially for indoor locations. APCO's work with industry partners helped lead the FCC to adopting new rules that will ensure PSAPs have the information they need to find 9-1-1 callers.

More at apointl.org/advocacy/topics/911-location-accuracy.html

FirstNet

The First Responder Network Authority (FirstNet) was created by the Middle Class Tax Relief and Job Creation Act of 2012. FirstNet is responsible for implementing a nationwide, interoperable public safety broadband network. APCO played a key role in leading an extensive and successful lobbying effort to secure passage of this significant legislation.

More at www.apointl.org/advocacy/topics/firstnet.html

Recognizing the 9-1-1 Profession

9-1-1 professionals protect the lives of the general public and first responders every day. APCO works to ensure that public safety telecommunicators are properly recognized for their life-saving work and provided the resources they need to accomplish their missions.

More at apointl.org/advocacy/topics/soc-revision.html

Cybersecurity

As advanced technologies become integrated into public safety communications networks, new and emerging cyber risks are an increasing concern. APCO develops resources and training materials to help PSAPs prevent, detect, mitigate and respond to cyber threats.

Next Generation 9-1-1

9-1-1 systems across the nation are dependable but based upon decades-old technology. The vision of a Next Generation 9-1-1 system is for the PSAP to be able to receive and process various forms of data from the public and other sources, including calls, texts, photos, videos and sensor information. APCO works to help prepare PSAPs for broadband communications and ensure that Next Generation 9-1-1 and other emerging technologies are innovative, interoperable and cost-effective.
